Pruning Info:						
Pruning Group A: These varieties flower on growth produced the previous year. Lightly prune out weak or dead stems, right after blooming is finished (May or						
Pruning Group B1: These varieties flower on wood that was hardened off from previous year's growth.						
This group usually consists of a heavy flush of flowers in May - June on the previous season's growth, followed by a second smaller flush of blooms in September						
Note: If rejuvenation is needed, a severe pruning can be carried out. It will reduce the number of flowers, but will not hurt the plant. Follow instructions						
as in Group C.						
Pruning Group B2: These varieties bloom simultaneously on last year's growth and the current season's growth.						
This group usually blooms from June to September continuously. Pruning can be done as in Group B1, or Group C every 2nd year.						
Pruning Group C: These varieties bloom on the current season's growth only.						
Blooms commence in summer and continue through fall. Prune back in late Feb or March to two strong sets of buds on each stem close to ground level.
