Vidal Wine Grape		Very productive white wine grape. Tends to over crop and crop prematurely. Thinning fruit is recommended. Very thick skin (Makes a dry white wine)	5	October	Self-fruitful	16.95 (5)
Haskap Berry aka. Honeyberry (<i>Lonicera caerulea/ kamtschatica</i>)		Native to Canada, Russia and Japan. Attracts pollinators, birds (use 1/4" - 1/2" netting). High yielding, pest and disease resistant. Flavor is a combination of a blueberry, Saskatoon, and raspberry. High in antioxidants, vitamin C. Needs two different varieties for cross pollination (see recommended varieties in descriptions below, ratio 1:5, close proximity). Space shrubs 1.2 to 2m apart, 2.5 to 3m between rows. Blooms on old wood.				
Aurora Haskap		Companion variety for Borealis. Very productive and has large sweet tasting berries that are easy to pick. One Aurora plant can pollinate eight Borealis and vice versa.	3	Late June	Borealis	14.95 (21)
Berry Blue (aka Berry Smart Blue) Haskap Berry		Russian variety. Fastest growing and tallest varieties (Ht 1.8 to 2.4m), many flowers. Somewhat smaller and not as sweet of fruit, offers a high yield. Recommended by U of Sask. as a pollinator variety.	3	June	any other variety	14.95 (37) 19.95 (41)
Borealis Haskap Berry		Canadian variety. Sweet/tangy, large fruit. Not as firm as Tundra. Compact growth habit, height 1.2m.	3	June	Aurora, Honeybee, Berry Blue	14.95 (47) 19.95 (21)
Cinderella Haskap Berry		New variety. Smaller, more compact shrub (1m x 1m). Large, tasty fruit.	3	June	any other variety	14.95 (20)

Small Fruit 2019 Blue - New Stock 2019 Name	NS Native	Description	Zone	Harvest	Pollination	Red - Three or less in stock New - 2019 Price/(# in Stock)
Honey Bee Haskap		Canadian variety. Selected to be a pollinator for 'Borealis', 'Tundra' & 'Indigo Series'. Fast growing as well as quick to set fruit. Fruit is held on the bush very firmly. The also stay on the plant longer than most other varieties. Not recommended for mechanical harvesting. 2.1m x 1.5m	3	Late June	Used as a pollinator	14.95 (5)
Indigo Treat Haskap		Canadian variety. Similar size fruit to Tundra but easier to propagate. Sweet taste.	3	June	Aurora, Honeybee, Berry Blue	14.95 (17)
Keiko Haskap		Japanese variety. Medium to large, oval, tart-sweet berries. One of the sweetest to taste. Apex of berries are flattened. H 1.5 - 2m S 1.5 - 2m.	3	Late June	Aurora, Honeybee, Berry Blue, Borealis	14.95 (49)
Tana Haskap		Japanese variety. Late blooming. Oval, medium to large fruit. Tart-sweet taste. Medium-firmness. Height 1.5 - 2m	3	Mid-June	Aurora, Honeybee, Berry Blue, Borealis, Keiko	14.95 (42)
Tundra Haskap Berry		Canadian variety. Firmest berry, suitable for commercial production (use machinery for harvesting). Sweet/tart taste. Great for freezing. Height 1.2 - 1.5m	3	June	any other variety	14.95 (39) 19.95 (30)

Small Fruit 2019 Blue - New Stock 2019 Name	NS Native	Description	Zone	Harvest	Pollination	Red - Three or less in stock New - 2019 Price/(# in Stock)
Woloszebnica Haskap Berry		Russian variety. Very hardy. Long shaped berries appear very early. Fruit is navy-blue and juicy. Taste is described as sweet -sour. Harvesting is best done in stages as the don't all ripen at the same time, when ripe easily fall off the bush. Prune every year to remove damaged, old and broken shoots. Height 2m	3	June	any other variety	49.95 (4)
Jostaberry (<i>Ribes nidigrolaria</i>)		Attracts pollinators				
Jostaberry		Pronounced "yust-a-berry", a complex cross between a blackcurrent bush and a gooseberry bush. Nearly black berries taste like sweet gooseberries with a slight taste of black current. Thornless, and disease resistant. Plant in full sun to partial shade, in rich, moist, well-drained, slightly acidic soil. Best about 2m apart. Fertilize in early spring, prune out dead wood and remove a few of oldest canes, down to ground level.	4	July	Self-fertile	21.95 (1) 24.95 (14)

Small Fruit 2019 Blue - New Stock 2019 Name	NS Native	Description	Zone	Harvest	Pollination	Red - Three or less in stock New - 2019 Price/(# in Stock)
Lingonberry aka. Partridgeberry (<i>Vaccinium vitis- idaea</i>)		Ericaceae family (cranberries and blueberries). Low growing, semi-evergreen, woody shrub. Flowers on previous year's growth. Small, pink, bell-shaped flowers in spring, produce edible, bright red to dark red berries, 1/4-1/2" in diameter, highly flavourable but not as tart as cranberries. Harvest in fall after sharp frost. Full sun, well-drained, acidic 4.3 - 5.5 pH, amended with peat moss. Rich in anti-oxidants, benzoic acid, Vitamins A, C and magnesium. Pollinated by bees	3	Sept/Oct	Self-fertile	11.95 (2) 15.95 (5)
Raspberry (<i>Rubus idaeus</i>)		Attracts pollinators. Plant canes 12-18" apart. Full sun, average to moist, well-drained soil, pH 6.5 to 6.8.. Each spring prune out all dead and two-year old canes to the ground, leaving only last year's growth standing. Suckering habit, some spines.				
AAC Eden		Large, firm fruit, sweet flavour, medium-red. Excellent yield. Spineless variety. Vigorous, very hardy.	4	Midseason	Self-fertile	6.95 (17)
Double Delight Raspberry		Fall bearing. Large, firm, red berries with a sweet tangy taste. Ht 1.5m. Hardy, developed at Morden, Manitoba.	4	Late season	Self-fertile	6.95 (11)
